Quality Assurance Engineer

Dear Madam / Sir

I would like to state how exciting it is to send my application to you as Quality Assurance Engineer. I have had great joy applying for the advertised position with the completely automated framework as asked. I have implemented Cucumber BDD approach with Selenium WebDriver using Java language in my framework. This is just a brief representation which shows what I am capable of.

I am an ISTQB-certified Software Test Automation Engineer with 1 year of experience automating the UI of web-based applications, DataBase validations, and API tests.

I have great coding and logical skills, an eye for detail, analytical thinking as well as strong interpersonal and communication skills. I am a quick learner, a great team player and able to pass on my knowledge to others.

I have an extensive experience in an Agile environment and with many testing types, ie functional testing, regression testing, smoke testing... You may find a detailed information about my background and tools I have experience with on my Resume.

I thank you in advance for the time that you will spend on my application and for considering my candidacy and hoping to hear back from you soon.

Sincerely,

Mustafa Hikmet Özcan
